KEY Mode(reference to video "07-advanced functions"):

BLUE LIGHTS :ETS/ATS MODE – light mode key ,wiper key will be recognized as single button, At this point the button will automatically operate the switch of the vehicle according to the built-in script
YELLOW LIGHT: All switches are identified individually, and each switch positon is identified as a separate button that can be used in other games.

Process after receiving the goods:

1、connect the USB (USB port is located in the right rear, the lower part of the wiper switch) to the computer, check whether the system identification is normal, (can correctly identify the game controller)
2、 watch the video sequence, you can speed up watching, but do not skip to watch (there are text prompts for some places to pay attention to in the video, skip to watch will miss important information and resulting in installation with errors!)
3、 after the installation is completed, the final debugging is carried out.(Test the functions of various keys, mode switching, turn signal automatically positive, automatic synchronization function)

Game button function test

Do not use the system built-in controller test (some key execution speed is very fast, the system built-in can not see the key execution process)
Use MMJOY to test:

MMJoy2-20160818(禁止用于商业用途\Использование проекта в коммерческих целях/получения прибыли запрещено)
